

SPECIFICATION AMENDMENTS

The originally submitted Specification is objected to for not following the guidelines in 37 CFR 1.77(b). A Substitute Specification and Abstract, and a Marked-Up Specification and Abstract, are provided. However, since so many changes were made to place the Specification in proper form, the Marked-Up Specification shows all the original language with strike-through markings and the replacement language underlined. The applicant tried very hard to make changes in the order of presentation of his disclosure information to meet the guidelines in 37 CFR 1.77(b), and to do so without adding new matter. He believes that no new matter has been added in the Substitute Specification and Abstract provided and now respectfully requests that the Examiner withdraw the objection to the Specification on pages 3-6 of the Office Action.
